Empathize & Discover – Empathy Map Canvas

Date	01 October 2026
Team ID	SWTID-2026-7951
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

User Persona: Branch User / Administrator

The empathy map is based on the project scenario and focuses on the user's behaviours, attitudes, goals and challenges. The supplied template organizes the map into Think & Feel, Hear, See, Say & Do, Pain and Gain.

THINK & FEEL • I expect to see only records I am authorized to access. • I want branch information to be protected. • I need confidence that access rules are applied consistently. • As an administrator, I need unrestricted access for legitimate management tasks.	HEAR • Users should access only the data relevant to their branch. • Security rules must not expose confidential records. • Administrators need broader access than ordinary users.
SEE • Records contain a Branch field such as EEE. • Different users may belong to different branches. • The system uses roles and access-control rules.	SAY & DO • I try to open records required for my work. • I check whether the record belongs to my branch. • I expect the system to block unauthorized records automatically. • Administrators review and manage records across branches.
PAIN • Unauthorized users may see records from another branch. • Inconsistent access control can create security risks. • Manual checking of every record is inefficient. • Overly strict rules can block administrators.	GAIN • Record-level security based on the Branch field. • EEE users can view EEE records only. • Administrators retain full access. • Automatic enforcement reduces manual checking and improves confidence.

Empathy Insight:

The central user need is controlled, predictable access to records without preventing legitimate administrative access.

Example: Script-Controlled ACL – Restrict Record Access Based on Field Value
