

Project Design Phase

Problem – Solution Fit Template

Date	01 October 2026
Team ID	SWTID-2026-7951
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

The supplied canvas covers Customer Segment, Customer Constraints, Available Solutions, Jobs-to-be-Done/Problems, Root Cause, Behaviour, Triggers, Emotions, Solution, and Channels. [filecite?turn2file2?L5-L46?](#)

Canvas Area	Project Analysis	Canvas Area	Project Analysis
1. CUSTOMER SEGMENT(S)	EEE branch users and administrators who access and manage records.	6. CUSTOMER CONSTRAINTS	Users must not see records outside their authorization; administrators need broader access. The decision should be automatic.
5. AVAILABLE SOLUTIONS	Broad role/table permissions, manual branch checks, separate ACL rules, or application filtering. These may not consistently enforce record-level security.	2. JOBS-TO-BE-DONE / PROBLEMS	View required records while preventing disclosure of records belonging to another branch; administrators need full visibility.
9. PROBLEM ROOT CAUSE	Access is not sufficiently tied to the record's Branch value and the logged-in user's authorization context.	7. BEHAVIOUR	Users log in, search and open records. Administrators access records across branches. Users expect the platform to enforce authorization automatically.
3. TRIGGERS	A user attempts to open a branch-specific record or an administrator needs to manage a record.	4. EMOTIONS: BEFORE / AFTER	Before: uncertainty about protection or concern about admin blockage. After: confidence in controlled access and predictable administration.
10. YOUR SOLUTION	A scripted ACL compares user context with the record Branch. EEE users can view EEE records; users failing the condition are denied; administrators retain full access.	8. CHANNELS OF BEHAVIOUR	Online: ServiceNow web interface, lists and forms. Offline: security reviews, requirement discussions, testing and validation.

Problem–Solution Fit:

The proposed ACL directly connects the access decision to the record's Branch field and the user's authorization context, addressing the stated record-level access problem. The template's purpose is to understand the existing situation and improve it for the target group.
