

Project Development Phase

Functional & Performance Testing Template

Date	01 October 2026
Team ID	SWTID-2026-7951
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	_____

The supplied template uses Test Case ID, Scenario, Test Steps, Expected Result, Actual Result and Pass/Fail, and includes performance tests.

Testing approach:

Because this project is a scripted ServiceNow ACL rather than an ML model, model-accuracy metrics are not applicable. The development validation is therefore based on access-control correctness, negative/positive scenarios, consistency and response performance.

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	EEE User – EEE Record	1. Log in as EEE user. 2. Open a record with Branch = EEE. 3. Attempt to view the record.	EEE user is allowed to view the EEE record.	To be filled after execution	PASS / FAIL
FT-02	EEE User – Non-EEE Record	1. Log in as EEE user. 2. Open a record whose Branch is not EEE. 3. Attempt to view it.	User is denied if the configured rule restricts access to EEE records only.	To be filled after execution	PASS / FAIL
FT-03	Non-EEE User – EEE Record	1. Log in as a non-EEE user. 2. Open an EEE record. 3. Attempt to view it.	Unauthorized user cannot view the EEE record.	To be filled after execution	PASS / FAIL
FT-04	Administrator – EEE Record	1. Log in as administrator. 2. Open an EEE record. 3. Attempt to view it.	Administrator can view the record.	To be filled after execution	PASS / FAIL
FT-05	Administrator – Other Branch Record	1. Log in as administrator. 2. Open a non-EEE record. 3. Attempt to view it.	Administrator retains full access across branch values.	To be filled after execution	PASS / FAIL
FT-06	Branch Field Validation	1. Create/select records with EEE and non-EEE Branch values. 2. Test each with authorized and unauthorized users.	ACL decision changes according to the configured Branch condition.	To be filled after execution	PASS / FAIL
FT-07	Missing/Invalid Branch Value	1. Select a record with an empty or unexpected Branch value. 2. Attempt access as normal user. 3. Attempt access as administrator.	Normal user is not incorrectly granted restricted access; administrator retains intended access.	To be filled after execution	PASS / FAIL
FT-08	Repeated Access Consistency	1. Repeat the same access attempt several times. 2. Compare results.	The same user/record combination produces a consistent authorization result.	To be filled after execution	PASS / FAIL
PT-01	ACL Response Time	1. Open representative records with ACL enabled. 2. Observe record-opening response. 3. Compare with normal navigation.	ACL should not introduce noticeable unnecessary delay during record access.	To be measured	PASS / FAIL
PT-02	Multiple User Access	1. Test several authorized/unauthorized user sessions. 2. Open records repeatedly.	ACL continues to return correct decisions without abnormal slowdown or errors.	To be measured	PASS / FAIL

Test coverage summary:

Positive coverage includes EEE-user and administrator access. Negative coverage includes unauthorized non-EEE access and invalid/missing Branch values. Performance coverage checks that the ACL does not create unnecessary delay.
